EDUCATION

Duke University

Durham, NC

B.S.E. Biomedical Engineering | B.A. Computer Science

Anticipated Graduation: May 2026

Honors/Awards: Duke QuestBridge Scholar, Florence Family Scholarship Recipient, Post Grata Award Recipient

Coursework: Biphotonic Instrumentation, Deep Tissue Optics, ML & Imaging, Bioinstrumentation, Signals & Systems

EXPERIENCE AND PROJECTS

Non-Contact Photoacoustic Tomography

Durham, NC

Senior Design with Dr. Adam Wax & Dr. Junjie Yao

Jan 2026 - Present

- Designing a benchtop system that images inside tissue without physical contact, replacing the ultrasound probe used in conventional photoacoustic imaging with a laser vibrometer setup to detect nanoscale (>0.2 nm) surface vibrations
- Integrating an optical and analog signal chain (photodiode, TIA, beam expander, pulsed laser) into an interferometer system
- Modeling photoacoustic pressure generation and impedance from first principles to set excitation and detection specs
- Developing a Python GUI for axial image reconstruction (lateral scanning, FFT, signal averaging) targeting 1 cm depth

Electromyography (EMG) Circuit

Durham, NC

Bioinstrumentation Project

Jan - May 2024

- Designed an analog EMG front-end (instrumentation amplifiers, bandpass filtering) for muscle signal acquisition
- Optimized gain staging and noise rejection to isolate bicep and tricep activations for downstream signal processing

Analog Hearing Aid for Low-Resource Settings

Durham, NC

Bioinstrumentation Project

Aug - Dec 2023

- Designed and built a low-cost analog hearing aid prototype ($<\$30$ parts), achieving $<2\%$ harmonic distortion, up to $55\times$ gain
- Engineered a dual-passband filter system to amplify key speech frequencies while suppressing non-speech noise
- Validated performance with a 4.4/5 speech intelligibility score across user trials, in compliance with ANSI standards

Scalable Machine Learning for Antibiotic Virtual Screening

Durham, NC

Computational Drug Discovery Project

Aug - Dec 2025

- Applied transfer learning to graph neural networks, achieving ROC-AUC 0.936 on 2,560 antibiotic candidates
- Implemented robust ML validation controls (scaffold-based splits, adversarial y-shuffling) to detect data leakage

Arts North Carolina

Durham, NC

Data Analytics Project

Jan - May 2025

- Collaborated with the Arts NC director & NC DPI to produce research to support an arts education NC Bill H418
- Applied machine learning methods to identify disparities in academic performance linked to arts education
- Produced a legislative brief presented to 150+ legislators during Arts Day NC

Automated Computational Antibiotics Modeling Lab

Durham, NC

Research Project with Dr. Michael Lynch

Jan - May 2023

- Built an automated in silico screening pipeline for antibiotic analogues using molecular dynamics simulations
- Developed a Python-based workflow integrated with ChimeraX, increasing molecular simulation throughput by $\sim 100\times$
- Applied AlphaFold and RDKit to perform structure-based and cheminformatics analysis on large-scale datasets

LEADERSHIP AND ACTIVITIES

MEDesign

Durham, NC

Co-President

Jan 2022 - Jan 2024

- Organized projects focused on device and digital health, coordinating mentorship & progress across teams
- Drove organizational growth from 6 to 100+ members and secured funding through multiple university partnerships
- Lead a 5-person project of an app-linked wearable breathalyzer, creating a minimal viable prototype in 4 months

SKILLS

Machine Learning: Python, Scikit-Learn, RDKit, Pandas, Data Processing, Feature Engineering, NumPy

Research: Signal Processing, Data Visualization, ODE Modeling, First-Principles Physical Modeling, Biosignal Acquisition

Embedded & Hardware: PCB Milling, Soldering, Oscilloscopes, BLE (Bluetooth), Arduino, KiCad, 3D Printing

Software & Tools: Jupyter, GitHub, SQL, Firebase, Flutter, Fusion 360, PyVISA, SciPy, Matplotlib
